DATA SCIENTIST | DATA ANALYST

PROFESSIONAL SUMMARY

Data Scientist and Data Analyst with hands on experience building machine learning models, NLP pipelines, and data-driven web applications across legal, cybersecurity and healthcare domains. Strong in Python, SQL and predictive modelling with proven ability to clean, analyse and transform raw data into actionable insights and deploy end-to-end ML solutions. Experienced in data visualization, statistical analysis and automation, with a strong interest in Generative AI, Natural Language Processing and applied machine learning for real-world decision support.

WORK EXPERIENCE

Data Analyst Intern | Egobeke Cooperative, Owerri Imo State | *December 2023 – June 2024*

- Analysed financial and operational datasets using Python, MySQL, Excel and Power BI to generate insights for executive decision-making.
- Cleaned, transformed, and validated structured and unstructured data, improving data quality and consistency by 30%.
- Built interactive dashboards in Power BI to track business performance metrics and operational trends.
- Performed statistical analysis to identify patterns in revenue and operational data, supporting data-driven planning.
- Automated recurring reporting workflows, reducing manual reporting time and improving accuracy of weekly reports.

Machine Learning Intern | Dala Innovation (Remote) | *July 2025 – November 2025*

- Led a team responsible for extracting and structuring textual datasets from historical Lango language books using Tesseract OCR.
- Designed data preprocessing pipelines to convert scanned documents into structured machine-readable datasets.
- Applied machine learning classification techniques to organize and label extracted linguistic data.
- Coordinated remote collaboration, task tracking, and project delivery across distributed team members.
- Ensured timely completion of model development and data structuring milestones through structured workflow management.

RELEVANT PROJECTS

AI Evaluation & Red-Flag Detection in Legal Decision-Making (EB-1A RFE Risk Analyzer) (GitHub)

Personal Project | *July 2025*

- Developed an NLP-driven document analysis pipeline to detect legal risk indicators in immigration petition texts.
- Built supervised machine learning classification models achieving 90% accuracy in detecting high-risk textual patterns.
- Designed explainable scoring frameworks and evaluation rubrics aligned with AI evaluation standards.
- Integrated rule-based logic with ML workflows to simulate real-world adjudication support systems.
- Generated automated legal-style analytical reports in DOCX and PDF formats with severity grading and structured insights.

Cybersecurity Awareness Prediction System (GitHub) | Federal University of Technology, Owerri | *September 2024 – January 2025*

- Developed a Random Forest model achieving 92.14% accuracy in predicting student cybersecurity awareness levels.
- Performed feature engineering, preprocessing, and model optimization to improve predictive performance.
- Built and deployed a Django web application for real-time prediction and personalized feedback delivery.
- Designed an end-to-end ML pipeline from data collection and modelling to deployment and user interaction.

House Price Prediction Personal Project *August 2024 - October 2024* (GitHub)

- Developed regression models using Random Forest and Linear Regression to predict housing prices.
- Cleaned and processed large real estate datasets through data transformation and feature engineering.
- Built a Django based web interface for real-time price prediction and model interaction.

Health Insurance Cost Prediction System (GitHub) | Personal Project | *January 2026 – February 2026*

- Built regression-based machine learning models to predict insurance charges using demographic and lifestyle data.
- Conducted exploratory data analysis (EDA), feature engineering, and preprocessing to enhance model interpretability.
- Trained and evaluated multiple models including Linear Regression and ensemble methods using MAE and RMSE metrics.
- Developed an interactive prediction interface for user input and real-time cost estimation.

EDUCATION

Bachelor of Technology (B.Tech) — Software Engineering | Federal University of Technology, Owerri | *December 2019 – December 2024*

Relevant Coursework: Data Analysis, Database Systems, Software Engineering, Artificial Intelligence, Machine Learning

---

CERTIFICATIONS

Data Science / Machine Learning Certificate – *3MTT Training, 1st December 2025*
Verification: Certification Link
Data Science Bootcamp (15 Weeks) — *TechCrush, 2026*
Verification: Certification Link
Python Developer Certification — *Zero to Mastery Academy (Udemy), 2021*
Machine Learning & Data Science with Python — *Goeduhub Technologies, 2024*

TECHNICAL SKILLS & TOOLS

Programming & Query Languages: Python, SQL, Excel
Data Analysis & Visualization: Power BI, Pandas, NumPy, Matplotlib, Excel Dashboards
Machine Learning & AI: Scikit-learn, NLP, Predictive Modelling, Classification, Regression, Feature Engineering
Frameworks & Tools: Django, Flask, Git, GitHub,
Cloud & MLOps: Microsoft Azure (ML Studio, Model Experimentation)
AI & Automation Tools: LangChain, Hugging Face Transformers, Zapier, Make, n8n

---

KEY COMPETENCIES

Data Cleaning, Statistical Analysis, Data Visualization, Machine Learning, NLP, Model Deployment, End-to-End ML Pipelines and Problem Solving

---
