DATA SCIENTIST | DATA ANALYST

PROFESSIONAL SUMMARY

Data Scientist and Analyst with hands-on experience building and deploying end-to-end machine learning solutions across legal, cybersecurity, and healthcare domains. Skilled in Python, SQL and statistical modelling with a strong track record of developing NLP pipelines and predictive models achieving up to 92% accuracy. Experienced in data visualization, automation and real-time ML deployment using Django. Passionate about Generative AI, NLP and applied AI systems for decision support

---

WORK EXPERIENCE

Data Analyst Intern | Egobeke Cooperative, Owerri Imo State | *December 2023 – June 2024*

- Analysed financial and operational datasets using Python, MySQL, Excel and Power BI to generate insights for executive decision-making.
- Cleaned, transformed, and validated structured and unstructured data, improving data quality and consistency by 30%.
- Built interactive dashboards in Power BI to track business performance metrics and operational trends.
- Performed statistical analysis to identify patterns in revenue and operational data, supporting data-driven planning.
- Automated recurring reporting workflows, reducing manual reporting time and improving accuracy of weekly reports.

Machine Learning Intern | Dala Innovation (Remote) | *July 2025 – November 2025*

- Led a team responsible for extracting and structuring textual datasets from historical Lango language books using Tesseract OCR.
- Designed data preprocessing pipelines to convert scanned documents into structured machine-readable datasets.
- Applied machine learning classification techniques to organize and label extracted linguistic data.
- Coordinated remote collaboration, task tracking, and project delivery across distributed team members.
- Ensured timely completion of model development and data structuring milestones through structured workflow management.

RELEVANT PROJECTS

AI Evaluation & Red-Flag Detection in Legal Decision-Making (EB-1A RFE Risk Analyzer) (GitHub)
Personal Project | *July 2025*

- Developed an NLP-driven document analysis pipeline to detect legal risk indicators in immigration petition texts.
- Built supervised machine learning classification models achieving 90% accuracy in detecting high-risk textual patterns.
- Designed explainable scoring frameworks and evaluation rubrics aligned with AI evaluation standards.
- Integrated rule-based logic with ML workflows to simulate real-world adjudication support systems.
- Generated automated legal-style analytical reports in DOCX and PDF formats with severity grading and structured insights.

Cybersecurity Awareness Prediction System (GitHub) | Federal University of Technology, Owerri | *September 2024 – January 2025*

- Developed a Random Forest model achieving 92.14% accuracy in predicting student cybersecurity awareness levels.

- Performed feature engineering, preprocessing, and model optimization to improve predictive performance.
- Built and deployed a Django web application for real-time prediction and personalized feedback delivery.
- Designed an end-to-end ML pipeline from data collection and modelling to deployment and user interaction.

House Price Prediction Personal Project *August 2024 - October 2024* (GitHub)

- Developed regression models using Random Forest and Linear Regression to predict housing prices.
- Cleaned and processed large real estate datasets through data transformation and feature engineering.
- Built a Django based web interface for real-time price prediction and model interaction.

Health Insurance Cost Prediction System (GitHub) | Personal Project | *January 2026 – February 2026*

- Built regression-based machine learning models to predict insurance charges using demographic and lifestyle data.
- Conducted exploratory data analysis (EDA), feature engineering, and preprocessing to enhance model interpretability.
- Trained and evaluated multiple models including Linear Regression and ensemble methods using MAE and RMSE metrics.
- Developed an interactive prediction interface for user input and real-time cost estimation.

EDUCATION

Bachelor of Technology (B.Tech) — Software Engineering | Federal University of Technology, Owerri | *December 2019 – December 2024*

Relevant Coursework: Data Analysis, Database Systems, Software Engineering, Artificial Intelligence, Machine Learning

---

CERTIFICATIONS

Data Science / Machine Learning Certificate – *3MTT Training*
Verification: Certification Link
Data Science Bootcamp (15 Weeks) — *TechCrush*
Verification: Certification Link
Data Science Certification — *TS Academy*
Verification: Certification Link

TECHNICAL SKILLS & TOOLS

Programming & Query Languages: Python, SQL, Excel
Data Analysis & Visualization: Power BI, Pandas, NumPy, Matplotlib, Excel Dashboards
Machine Learning & AI: Scikit-learn, NLP, Predictive Modelling, Classification, Regression, Feature Engineering
Frameworks & Tools: Django, Flask, Git, GitHub,
Cloud & MLOps: Microsoft Azure (ML Studio, Model Experimentation)
AI & Automation Tools: LangChain, Hugging Face Transformers, Zapier, Make, n8n

---

KEY COMPETENCIES

Data Cleaning, Statistical Analysis, Data Visualization, Machine Learning, NLP, Model Deployment, End-to-End ML Pipelines and Problem Solving

---
